

# Applying decals

Decals make great embellishments for your fused glass art and are simple and easy to apply. We have a wide selection of decals available on our website from busy bees to Christmas trees!

- 1 Pre-fuse your glass piece**
- 2 Cut out your decal**

Please note that these glass decals have a flux overcoat which will leave a faint line where you cut the decal.
- 3 Soak the decal in clean warm water, the decal will curl up, after a minute remove from water**
- 4 Carefully slide the transfer from the backing paper onto the glass**
- 5 Gently squeegee the transfer to remove any water between the decal and the glass**
- 6 Allow to dry for around 2 hours before firing**
- 7 We recommend firing between 745 - 760°C**

Please note that when firing to higher temperatures colours will fade. Once kiln fired these decals are permanent and will not scratch or rub off.
