

# Polishing a leaded panel

Polishing your final work finishes it off and will give you a sleek, antique look.

To achieve a nice dark shine to your lead, brush a lean amount of black grate polish onto the top surface of the lead. Squeeze a small amount of polish onto your paper and work it into the end of a soft brush. Good firm brushing in the direction of the lead will give your piece a sleek, antique look.

When you're happy with the polish, remove any stray bits of dirt that may be lurking on the glass or in the edges of the lead – you can check for this by holding your piece up to the light.

And there you have it! Time for a cup of well deserved tea!
