

The best for your koi

The assurance of optimal care

Koi are special pets and by many considered to be living jewels. Much effort is put into creating luxurious ponds with outstanding circumstances for koi to thrive in. If the water conditions are right and the fish have sufficient space to live in they can feel well and are a joy to look at. To bring out the best in them state of the art diets should be used, tailor made for the circumstances the koi are kept in.

For the koi themselves a tasty, nutritious and well balanced diet with a high digestibility and minimal water pollution is required. Koi keepers expect the feed to support health and a good condition. Another requirement is for the younger koi to have a good growth rate whereby the typical "koi shape" is maintained. Lastly the colour patterns and the colour intensity for which koi are so famous need to be contrasting, clear and vivid.

All the feeds in this program are extruded floating diets with an extremely high water stability. Only the best ingredients are selected and state of the art equipment and technology are used to produce our feeds. Before the diets are packed an extensive quality control is performed to check if the products meet our strict quality criteria. In this way our koi diets can contribute to healthy and beautiful koi and a joyous way of life with nishikigoi. We wish to supply a high quality koi feed line with which our customers and the koi keepers using them can be successful.

Feeding advice

Feed 2-4 times per day depending on fish size and water temperature and no more than the koi can eat within 5 minutes. Remove any non eaten feed from the pond in case of over feeding. The koi's appetite reduces significantly below a water temperature of 10 °C, therefore feed accordingly. Below a water temperature of 5 °C the koi should not be fed anymore. The metabolism slows down so much that the feed can only be partially digested which can result in intestinal obstructions.

Guaranteed quality

The special fresh keeping packaging can be closed light and airtight, so that quality and flavor of the food will be optimally retained.

Get the right food for healthy koi

Complete range of quality fish food

- With SaniComplex® for excellent digestion
- With SaniBooster® to enhance the immune system

A product of velda.com

Nutritious in all seasons

All Season Wheat Germ is a balanced and easily digestible fish feed for all seasons. Owing to its low protein content it is suitable for feeding from early spring till late in the autumn. Koi will benefit from this diet in times of stress, adverse conditions and when a boost of the condition is needed.

Health promotion

All Season Wheat Germ is the ultimate floating pellet food to keep Koi healthy and in good condition. Only highly digestible ingredients have been selected to make sure that the metabolism runs as smooth as possible. Naturally wheat germ is included so that also at low water temperatures digestibility is optimal. Furthermore organic acids are used to improve digestion under all conditions.

Intestinal balance

All Season Wheat Germs has been fortified with the prebiotic and probiotic system. Both act to maintain a good intestinal health. The probiotic consists of positive bacteria and the prebiotic, fructo-oligosaccharides, as their food source. This system counteracts pathogenic bacteria and promotes a better nutrient absorption. Next to that garlic has been included which is not only tasty to Koi but it also acts as a natural anti-bacterium lowering unwanted bacterial levels.

Immune stimulation

The β-glucans added are known to effectively train the immune system. In this way the natural disease resistance improves and results in quicker and more substantial actions when pathogens enter the body.

All Season Wheat Germs is available in 6 mm in bags of 3 litres.

Vivid colours and growth

Colour Hi-Grow Mix contains Astaxanthin and Spirulina for a beautiful range of colouring of your koi. Owing to its rich composition and special additives it is a very complete fish feed. The addition of Astaxanthin and Spirulina gives your koi lively colours. The added vitamin complex has a favourable effect on the resistance against diseases.

Unique features

Colour Hi-Grow Mix is a luxurious mix of three top feeds for koi. In this mix all the good elements of Astaxanthin, Spirulina and Wheat Germs are united. The unique combination has the following features:

- High quality ingredients such as the best fish meal and fish oil (rich in essential Ω-3 fatty acids)
- Krill meal which makes the feed extra attractive for koi
- Astaxanthin, spirulina and paprika for vivid, bright and intense colouration
- Prebiotic and probiotics to support the intestinal flora
- Wheat germ for a good digestion
- Organic acids for optimal health

Easily digestible

Altogether this feed is easily digestible which improves the intake of nutrients by your fish and prevents water pollution. Because this is a floating mix a good observation of the fish' eating behaviour is possible.

Colour Hi-Grow Mix is available in 3 and 6 mm in bags of 3 litres.

Basic feed for healthy fish

Staple Prime is 100% pure natural fish feed for daily care of koi and precious pond fish. Besides natural ingredients, like fish meal and fish oil, it contains wheat germ for an excellent digestion and well-being of your fish. The added krill meal is very nutritious and will stimulate ingestion.

Optimal digestibility

Staple Prime is a premium feed to keep koi in great condition throughout the year. The use of highly digestible fish and vegetable proteins promote digestion. The addition of wheat germ guarantees a good digestion even at low temperatures. For many koi keepers Staple Prime is the only choice at water temperatures below 15°C as they have experienced that this diet excels under colder conditions.

Vitality

Staple Prime is enhanced with a prebiotic and a probiotic to support the intestinal flora. The prebiotic, a fructoligosaccharide, acts as a food source for the positive gut bacteria that are essential for an optimal nutrient absorption and resistance. The probiotic bacteria included acts as the fish's own positive bacteria and helps to consolidate a good gut health. Especially after antibiotic treatments, where often all the gut bacteria are destroyed, it is important to quickly re-colonise with positive bacteria as supplied by Staple Prime.

Beneficial for fish health

Wheat germ is extremely useful in keeping the transit through the intestines working. This considerably lessens the risk of intestinal blockages or infections at low water temperatures. Staple Prime is rich in natural vitamin E and Ω-6 and Ω-3 fatty acids all of which are essential to keep koi healthy.

Staple Prime is available in 6 mm in bags of 3, 10 and 20 litres.

Complete feed for good growth

Excellent All-Round is a high grade feed that is rich in protein, meant for healthy koi and cypriniformes. Just like the other SaniKoi food products it contains chicory components which stimulate intestinal flora. The addition of Astaxanthin gives your fish lively colours. The added krill meal is very nutritious and will stimulate ingestion.

High growth and vivid colours

Excellent All-Round is a premium grower for koi with natural pigments for colour enhancement. All ingredients are carefully selected for tastiness, high digestibility and constant quality. Organic acids are used to further improve digestion. The high level of fish and vegetable proteins assures a high growth rate and consolidates the typical koi shape. The colour patterns and the intensity of the colours make koi such beautiful creatures. The pigments included like astaxanthin and capsanthin, a concentrated source of xanthophylls, make sure your koi develop intense, vivid colours. Excellent All-Round pairs a high growth to efficient pigmentation.

Optimal condition

Krill meal is added to the feed to make it extra attractive for koi and assures a good intake of the feed. The vitamin levels are adjusted to the needs of growing koi. Excellent All-Round has been fortified with the prebiotic and probiotic system. Both act to maintain a good intestinal health. The probiotic consists of positive bacteria and the prebiotic, fructo-oligosaccharides, as their food source. This system counteracts pathogenic bacteria and promotes a better nutrient absorption.

Excellent All-Round is available in 3, 6 and 10 mm in bags of 1, 3, 10 and 20 litres.
